DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented, for example, in independent claim 1 which include a zoom lens system having a first lens unit having negative optical power; a second lens unit having positive optical power; a third lens unit having positive optical power; fourth lens unit having positive optical power; and fifth lens unit having positive optical power, where at least three lens units out of the first lens unit to the fifth lens unit move during zooming as well as satisfying the recited numerical condition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yasu et al is cited to show a 6 unit system where units 1, 2, 3, 5, and 6 have the recited unit optical powers $(-, +, +, +, +)$ (Numerical Embodiment 1), but does not have the recited numerical condition (the index is over 1.88). In the Numerical Embodiment that does teach an index between 1.63 and 1.85 (Embodiment 4), the structure $(-, +, +, +, +)$ is not found. The other Numerical Embodiments of Yasu et al do not have either the structure or the numerical condition. Morooka et al teaches a $(-, +, +, +, +)$ variable power system, but does not meet the numerical condition of claim 1 (all of the Morooka et al examples teach an index of 1.49). The cited art in the PTO-1449 has the same deficiency as Morooka et al in that it has the $(-, +, +, +, +)$ structure, but does teach or suggest the numerical condition of claim 1.
